

# Funktsiya tushunchasi. Funktsiyaning limiti.

REJA:

1. Funktsiyaning ta'rifi, aniqlanish va qiymatlar sohasi.
2. Funksiyaning limiti
3. Cheksiz kichik va cheksiz katta funktsiyalar va ularning xo'ssalari
4. Aniqmasliklarni ochish
5. Birinchi va ikkinchi ajoyib limitlar

## 1. Funktsiyaning ta'rifi

Aytaylik  $X$  va  $Y$  haqiqiy sonlar to'plami berilgan bo'lsin.

**1-Ta'rif.** Agar  $X$  to'plamning har bir  $x \in X$  elementiga  $Y$  to'plamning yagona  $y \in Y$  elementi mos qo'yilsa, u holda bu moslik funktsiya deyiladi va uni  $y = f(x)$  kabi yoziladi.

Bu yerda  $x$  – erkli o'zgaruvchi(argument);  $y$  – erksiz o'zgaruvchi (funktsiya);  $f$  –  $x$  ni  $y$  ga mos qo'yuvchi qoida.

**2-Ta'rif.** Argument  $x$  ning berilgan funktsiya ma'noga ega bo'ladigan qiymatlar to'plamiga funktsiyaning *aniqlanish sohasi* deyiladi va uni  $D(f)$  bilan belgilanadi.

**3-Ta’rif.**  $x$  ning o’zgarishiga ko’ra  $y$  ning qabul qilishi mumkin bo’lgan qiymatlar to’plamiga funktsiyaning qiymatlar sohasi deyiladi va uni  $E(f)$  bilan belgilanadi.

## **2. Funktsiyaning limiti**

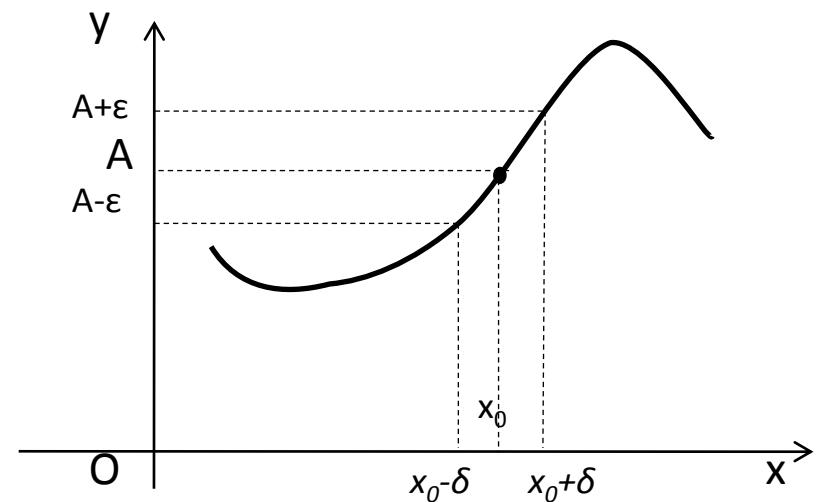

Aytaylik  $y = f(x)$  funktsiya  $X$  to’plamda aniqlangan bo’lib,  $x = a$  bo’lsin.

**1-Ta’rif.** Agar ixtiyoriy  $\varepsilon > 0$  son uchun shunday  $\delta > 0$  son topilib,  $0 < |x - a| < \delta$  tengsizlikni qanoatlantiruvchi barcha  $x$  lar uchun  $|f(x) - A| < \varepsilon$  tengsizlik bajarilsa, u holda  $A$  sonini  $f(x)$  funktsiyaning  $x \rightarrow a$  ga intilgandagi **limiti** deyiladi va uni  $\lim_{x \rightarrow a} f(x) = A$  ko’rinishda yoziladi.

$$|x - a| < \delta \Rightarrow -\delta < x - a < \delta \Rightarrow -\delta + a < x < \delta + a$$

oraliqni  $a$  nuqtaning  $\delta$  atrofi deyiladi.

Misol.  $\lim_{x \rightarrow 3} (x^2 - 5x + 8) = 9 - 15 + 8 = 2$

Umuman  $x$  argument  $a$  ga o'ngdan yoki chapdan intilishi mumkin. Agar bu limitlar mavjud bo'lsa, ularni mos ravishda  $f(x)$  funktsiyaning o'ng va chap limitlari deyiladi va ularni

$$\lim_{x \rightarrow a-0} f(x) = f(a - 0)$$

$$\lim_{x \rightarrow a+0} f(x) = f(a + 0)$$

ko'inishda yoziladi.

Agar  $f(a - 0) = f(a + 0) = A$  bo'lsa, u holda  $y = f(x)$  funktsiya  $x = a$  nuqtada limitga ega deyiladi.

### 3.Cheksiz katta va cheksiz kichik miqdorlar

Agar  $x \rightarrow a$  ga intilganda

$$\lim_{x \rightarrow a} f(x) = \infty \text{ yoki } \lim_{x \rightarrow a} f(x) = -\infty \text{ bo'lsa,}$$

U holda  $f(x)$  funktsiyani *cheksiz katta funktsiya* deyiladi.

Masalan  $x \rightarrow 2$  ga intilganda  $\lim_{x \rightarrow 2} \frac{x}{x-2} = \infty$  cheksiz katta

funktsiya bo'ladi.

Agar  $\lim_{x \rightarrow a} f(x) = 0$  bo'lsa  $f(x)$  funktsiyani *cheksiz kichik funktsiya* deyiladi.

Masalan,  $f(x) = \frac{x^2 - 1}{x + 1}$  funktsiya  $x \rightarrow 1$  ga intilganda cheksiz kichik funktsiya bo'ladi. Chunki

$$\lim_{x \rightarrow 1} \frac{x^2 - 1}{x + 1} = \lim_{x \rightarrow 1} (x - 1) = 0$$

Funktsiya limitining xossalari:

$\lim_{x \rightarrow a} f(x) = A$   $\lim_{x \rightarrow a} g(x) = B$  mavjud bo'lsa u holda

$$1) \lim_{x \rightarrow a} [f(x) + g(x)] = \lim_{x \rightarrow a} f(x) + \lim_{x \rightarrow a} g(x)$$

$$2) \lim_{x \rightarrow a} [f(x) \cdot g(x)] = \lim_{x \rightarrow a} f(x) \cdot \lim_{x \rightarrow a} g(x)$$

$$3) \lim_{x \rightarrow a} \frac{f(x)}{g(x)} = \frac{\lim_{x \rightarrow a} f(x)}{\lim_{x \rightarrow a} g(x)}$$

$$4) \lim_{x \rightarrow a} kf(x) = k \lim_{x \rightarrow a} f(x)$$

Misollar.  $\lim_{x \rightarrow 3} \frac{x^2 - 5x + 8}{x^2 - x + 4}$ .

$$\lim_{x \rightarrow 3} (x^2 - 5x + 8) = 9 - 15 + 8 = 2$$

$$\lim_{x \rightarrow 3} (x^2 - x + 4) = 9 - 3 + 4 = 10$$

3-xoSSaga ko'ra  $\lim_{x \rightarrow 3} \frac{x^2 - 5x + 8}{x^2 - x + 4} = \frac{\lim_{x \rightarrow 3} (x^2 - 5x + 8)}{\lim_{x \rightarrow 3} (x^2 - x + 4)} = \frac{2}{10} = \frac{1}{5}$ .

$$\lim_{x \rightarrow 3} \frac{x^2 - 5x + 8}{x - 3}.$$

$$\lim_{x \rightarrow 3} (x^2 - 5x + 8) = 9 - 15 + 8 = 2$$

$$\lim_{x \rightarrow 3} \frac{x^2 - 5x + 8}{x - 3} = \infty.$$

## 4. Aniqmasliklarni ochish

Limitlarni hisoblashda ba'zan quyidagi ko'rinishdagi aniqmasliklarga duch kelamiz:

$$\left(\frac{0}{0}\right), \left(\frac{\infty}{\infty}\right), (\infty - \infty), (1^\infty), (0^\infty), (0^0)(\infty^0).$$

Ushbu ko'rinishdagi limitlarni hisoblash aniqmasliklarni ochish deyiladi.

Misollar.

$$\lim_{x \rightarrow \infty} \frac{2x^2 - 3x - 5}{1 + x + 3x^2} = \frac{\infty}{\infty} = (*)$$

$$(*) = \lim_{x \rightarrow \infty} \frac{\frac{2x^2 - 3x - 5}{x^2}}{\frac{1 + x + 3x^2}{x^2}} = \lim_{x \rightarrow \infty} \frac{\frac{2x^2}{x^2} - \frac{3x}{x^2} - \frac{5}{x^2}}{\frac{1}{x^2} + \frac{x}{x^2} + \frac{3x^2}{x^2}} = \lim_{x \rightarrow \infty} \frac{2 - \frac{3}{x^2} - \frac{5}{x^2}}{\frac{1}{x^2} + \frac{1}{x} + 3} = \frac{2 - \frac{3}{\infty^2} - \frac{5}{\infty^2}}{\frac{1}{\infty^2} + \frac{1}{\infty} + 3} = \frac{2}{3}$$

$$\lim_{x \rightarrow -1} \frac{2x^2 - 3x - 5}{x + 1} = \frac{2(-1)^2 - 3 \cdot (-1) - 5}{-1 + 1} = \frac{0}{0}$$

$$\lim_{x \rightarrow -1} \frac{2x^2 - 3x - 5}{x + 1} = \frac{0}{0} = (*) \quad (*) = \lim_{x \rightarrow -1} \frac{(x+1) \cdot (2x-5)}{x+1} = (*)$$

$$(*) = \lim_{x \rightarrow -1} (2x - 5) = (*) = 2 \cdot (-1) - 5 = -2 - 5 = -7$$

$$\lim_{x \rightarrow 3} \frac{\sqrt{x+6} - \sqrt{10x-21}}{5x-15} \quad \lim_{x \rightarrow 3} \frac{\sqrt{x+6} - \sqrt{10x-21}}{5x-15} = \frac{0}{0} = (*)$$

$$(*) = \lim_{x \rightarrow 3} \frac{(\sqrt{x+6} - \sqrt{10x-21}) \cdot (\sqrt{x+6} + \sqrt{10x-21})}{(5x-15) \cdot (\sqrt{x+6} + \sqrt{10x-21})} = (*)$$

$$\begin{aligned}
 (*) &= \lim_{x \rightarrow 3} \frac{(\sqrt{x+6})^2 - (\sqrt{10x-21})^2}{(5x-15) \cdot (\sqrt{x+6} + \sqrt{10x-21})} = \\
 &= \lim_{x \rightarrow 3} \frac{x+6 - (10x-21)}{(5x-15) \cdot (\sqrt{x+6} + \sqrt{10x-21})} = \\
 &= \lim_{x \rightarrow 3} \frac{x+6 - 10x+21}{(5x-15) \cdot (\sqrt{x+6} + \sqrt{10x-21})} = \\
 &= \lim_{x \rightarrow 3} \frac{-9x+27}{(5x-15) \cdot (\sqrt{x+6} + \sqrt{10x-21})} = (*) \\
 \end{aligned}$$

$$(*) = \frac{1}{6} \lim_{x \rightarrow 3} \frac{-9(x-3)}{5(x-3)} = \frac{1}{6} \lim_{x \rightarrow 3} \frac{-9}{5} = \frac{1}{6} \cdot \left( \frac{-9}{5} \right) = -\frac{3}{10}$$

## 5. Birinchi va ikkinchi ajoyib limitlar

Birinchi ajoyib limit

$$\lim_{x \rightarrow 0} \frac{\sin x}{x} = 1;$$

Ikkinchi ajoyib limit

$$\lim_{x \rightarrow \infty} \left(1 + \frac{1}{x}\right)^x = \lim_{x \rightarrow 0} (1+x)^{1/x} = e.$$

# Misollar

$$\begin{aligned}\lim_{x \rightarrow 0} \frac{\sin(2x)}{x} &= \left(\frac{0}{0}\right) = \\ &= \lim_{x \rightarrow 0} \frac{2\sin(2x)}{2x} = 2 \cdot \lim_{x \rightarrow 0} \frac{\sin(2x)}{2x} = \\ &= 2 \cdot 1 = 2.\end{aligned}$$

$$\lim_{x \rightarrow \infty} \left(1 + \frac{1}{3x}\right)^{4x} = 1^\infty = \lim_{x \rightarrow \infty} \left( \left(1 + \frac{1}{3x}\right)^{3x} \right)^{\frac{1}{3x} \cdot 4x} = e^{\frac{4}{3}}$$
